Hijacked mailbox sending spam: billing@rahmantraders.com

Tenant Rahman Traders on mail-02. Opened 02:14, contained 02:33. Waiting on 1 decision from you.

What happened

02:14
Password guessing started on billing@
4,812 failed logins over 17 minutes from 312 IPs in 41 countries. 286 IPs blocked as they crossed the limit.

02:31
Login succeeded from a new country
IMAP login from 91.214.44.180 (Lithuania). This mailbox has only signed in from Bangladesh in the last 90 days.

02:32
Outbound mail jumped to 184× normal
1,840 messages queued in 9 minutes to 1,612 unknown recipients. Normal for this mailbox: 10 per hour.

02:33
Outbound mail for this mailbox held
Automatic. Messages are in quarantine, not deleted. Other mailboxes at Rahman Traders keep sending normally.

02:35
Server IP reputation checked: clean
185.42.17.22 is not listed on any of 8 blocklists. No other tenant affected.

Top source IPs

Showing 4 of 312

IP address	Country	Network	Attempts	Action
91.214.44.180	Lithuania	AS 212238	412	Signed in
45.148.10.92	Netherlands	AS 48090	388	Blocked
193.32.162.11	Romania	AS 47890	301	Blocked
103.149.28.54	Vietnam	AS 135905	254	Blocked

Analysis

This is an account takeover, not a server attack. The attacker guessed a weak password, then used the mailbox to send phishing that imitates a bank payment notice.

The rest of the server is unaffected. Holding outbound mail kept the shared IP off blocklists, so the other 411 tenants were never at risk.

Recommended: reset the password, sign out all sessions and turn on two-step login for this tenant. Then release or delete the held messages.

Traffic spike · Real customers, not an attack

Traffic up 9× and it is real customers. Server scaled, site stays online.

Tenant Deshi Mart on web-07. Spike began 19:02, matching their 11.11 sale email sent 18:58.

Requests per minute

Last 3 hours

Why Shield thinks this is real

Signal	During spike	Normal	Points to
Visitors from Bangladesh	94%	91%	Customers
Visitors adding to cart	12.4%	9.8%	Customers
Distinct IP networks	2,140	380	Customers
Requests to the login page	2%	2%	Customers
Scripted clients (no JS, no cookies)	3.1%	2.7%	Normal level

What Shield did

- **Turned on page caching**
  19:04 · 71% of requests now served from cache
- **Raised PHP workers from 20 to 48**
  Within this tenant's plan limit of 64
- **Kept other sites on web-07 protected**
  Deshi Mart capped at 60% CPU, 34 other sites unaffected
- **Did not block anyone**
  Blocking would have turned away paying customers

Site health now

Page load, median	640 ms
Errors (5xx)	0.2%
web-07 CPU	64%
web-07 RAM	49%

Suggestion for Deshi Mart

This tenant has run 3 sales this quarter and each one pushed web-07 past 60% CPU. Moving them to the Business plan or a dedicated node would remove the cap during the next sale.
